

Be Future Smart OR Future Ready?

Background:

Today, we all face a technology-infused, innovation-filled world in our future. We're already looking at the possibility of widespread smart houses, autonomous cars and artificial intelligence that can talk to us and work on our behalf. Our teachers', parents' and grandparents' curricula won't be sufficient. How do we identify the trends, predict what we will need and prepare us for it? We can be future ready if we know the targets / predictions exactly. But it is the most uncertain.... the target is continually moving. We may not know at least the direction of the target. The only solution will be "ready to be future smart – be adaptable".

Businesses may change to becoming predictive, agile, moral and innovative. Technology becomes connected faster and intuitive. New business models, new innovations, new global risks, new competitors, new markets and new powers will emerge. "Human" will have to become smarter, healthier and living longer.

Objective:

This session is about understanding and exploring the possible scenarios of the future so that the participants will be able to better prepare, for it today and design the future based on their goals. Therefore the main objective is not only to make the participants aware of the trends that shape the future but also to ensure that they use these trends to shape their future.

Program Outcome:

- Obtain a clear idea of future smart forecasts
- Understand what the future smart skills are
- Be open and ready for the change
- Focus your organization and yourself to "be ready" to "be smart"

Target Audience:

- HR Trainers, Strategists, Managers, Executives
- Managers who lead an important team in any organization
- Entrepreneurs, professionals in any field
- Anyone who wants to forecast and be future smart
